

MAS-4HDSD

Media Archive Systems

We Bring the Solution to You

The MAS-4HDSD is a Broadcast Quality Audio/Video Archiving Solution

Designed for use with any high definition serial digital (HD-SDI) tape playback to create editable MPEG files that are playable on any modern computer. It is capable of playing and digitizing four tapes or live videos simultaneously. The MAS-4HDSD includes four encoding sub-systems, a server with a DVD and an LTO recorder as well as monitoring in a road case. With a single pass of a tape, the files created are an HD MPEG-2, an SD MPEG 2, a quickly searchable / viewable MPEG-1 file, a metadata file and are all indexed by time-code and include closed captioning. The content can be placed on any computer storage device or imported into any modern editing system. A single LTO can contain up to 16 hours of material.

- Rent or lease, delivered to your site
- Conversion cost at less than **twenty dollars per hour of tape**
- Average productivity: Up to 80 hours per day
- The system is very easy to setup and is user friendly
- Conversion is done on site and can be handled by client staff or interns
- Tapes never leave client site thus assuring no loss of content or piracy at any time
- Reduces, considerably, the physical size of the library
