

MEDIA ARCHIVE SYSTEMS, INC

"We Bring the Solution to You"

"The American television and video heritage is at risk. Early television was broadcast live, kinescope or film copies were made selectively, other programs were deliberately destroyed, and videotapes were erased and recycled, still an unfortunate practice in the production of local television news. Television film and videotape vulnerability to deterioration further imperils this rich heritage, and additional videotape recordings may be lost to posterity if archival programs do not address format obsolescence."
-A Report on the Current State of American Television and Video Preservation, 1997 Library of Congress

The Problem

Film and tapes are a silent money pit. They deteriorate with age and even with each playback. Each tape format requires a new machine, but even the latest format quickly becomes obsolete. The content becoming ever more expensive to find, recover and use. Tape and film libraries require a great deal of valuable floor space in your facility.

The Solution

Media Archive Systems has developed a cost effective process to convert the images and sound from tape or film into computer files which can be played on any modern computer. Media Archive Systems will ship mobile archival systems to your site which lowers the cost and greatly simplifies the process.

Advantages

- Done at the Client's site
- Broadcast Quality
- Free-up real estate
- Non-Proprietary
- High Volume
- Low Cost
